DATE OF PRESENTATION

PAGE 2 AND THE REST AS BELOW

I. INTRODUCTION

Briefly describe your project and why you built it. What unique need does your project address (that's *not* available on the market)? What goals are you trying to meet?

II. DESIGN PROCESS

Describe your object-oriented design process here. What nouns and verbs did you find? How did you architect classes, responsibilities, and collaborators? What is your database architecture (if applicable)?

III. TRANSLATING DESIGN TO IMPLEMENTATION

How did you translate your design into a mobile app implementation? What worked? What didn't? Where were there gaps in the process and how did you bridge them?

IV. SUGGESTED CHANGES AND IMPROVEMENTS

What changes or improvements would you make to the design process that would make the design more complete?
